CT Elbow

Application Examples: Fracture	
Scan Protocol (See for Technical Factors)	**Upper Extremity**

Reformations: Coronal and Sagittal MPRs. 3D VR upon request.

1. *2x2 mm Coronal and Sagittal MPRs.* Align all viewport lines to be orthogonal to elbow and create MPRs. If patient is unable to place elbow in ideal position, make axial MPR.

2. *3D VR.* Load into GL Bone workflow. Rotate 360 degrees, capture one more image to close rotation, then tumble 90 degrees capturing image every 15 degrees.

   Series Description: **3D**
   Series Number: **1001**
